Campaspe System

Breakdown of Water in Store and Commitments: Terms and Definitions

GMW Share of Lake Eppalock: The volume of water held by GMW in Lake Eppalock.

GMW Share of Forecast Inflows: The GMW share of the volume of forecast inflows to Lake Eppalock for the 2021/22 and 2022/23 seasons with a probability of exceedance of 99%.

Volume Below Minimum Operating Level: The volume of water that cannot be released through existing infrastructure under gravity.

Storage and River Losses: The volume of evaporation and other water losses from the storages and from the natural rivers, lakes and waterways that are part of the irrigation network. Also called headworks losses.

Urban and Environment: Entitlements held by urban water corporations and the Victorian Environmental Water Holder.

Trade Commitments: The volume of Campaspe system water purchased by downstream systems that is yet to be delivered.

Remaining Allocated Volume (including Carryover): The volume assigned to water share holders under a 100% seasonal determination of high-reliability water shares plus the carried over resources that were allocated to water share holders in previous seasons, and are yet to be delivered.
